General Notes Table B.3:

1. Data reported as zero may be non-detect or less than 0.0005 mg/L.
2. ppb is parts per billion.
3. Null values or blanks indicate that no data was reported to WASA.
4. Third draw results - WASA attempts to collect an additional three samples from the home when a sample has a lead concentration greater than 0.500 mg/L. The chain-of-custody instructions require that the third draw be collected after a minimum of 10-minutes of high water use and then flushing the kitchen's cold water faucet for 60 seconds before taking the sample.
5. Additional monitoring data for the one-year period ending June 30, 2007 was included in this table to ensure completeness of this filing. WASA sequences the test result data by collection date but does not store the date the file was actually received and processed from the laboratory. This data sequencing process could result in the omission of some test results received after the reporting period, which is why WASA is submitting 12 months of data. WASA will capture the date the file was processed to avoid any overlap of test result data for future reporting purposes.
