Other Addition Non-Regulated Monitoring Data

Customer Collected Filtered Samples

DC Water operates a program where customers request a lead sampling kit to test their in-line point-of-use filtered water. The test kit comes with a 1-L bottle and instructions on how to take a sample. Customers collect their own sample and contact DC Water to deliver the bottle to the Washington Aqueduct. Results are then reported back to the customer through DC Water's Customer Service Program.

Customer Collected Profiles

DC Water operates a program when customers request a lead sampling kit without knowledge of their service line material. The profile kit comes with ten bottles and instructions on how to collect samples. Customers collect their own samples and contact DC Water to deliver the bottles to the Washington Aqueduct. Results are then reported back to the customer through DC Water's Customer Service Program.

Pipe Loop Research

DC Water collected stagnated samples from lead pipe loops to simulate lead levels released in the distribution system. The Washington Aqueduct laboratory analyzed the samples for lead.

US Army Corps of Engineers

Customer Service Samples

DC Water operates a program where customers request a lead sampling kit on an annual basis. The kit comes with bottles and instructions on how to take first and second draw samples. Customers collect their own samples and contact DC Water to deliver the bottles to the Washington Aqueduct. Results are then reported back to the customer through DC Water's Customer Service Program.

Post Lead Service Line Replacement Samples

DC Water operates a program where lead sampling kits are dropped off to customers that have had a partial or full lead service line replacement. Samples are typically dropped off approximately 4 months after the replacement to determine if it is necessary for customers to continue filtering their water. The kit comes with bottles and instructions on how to take first and second draw samples. Customers collect their own samples and contact DC Water to deliver the bottles to the Washington Aqueduct. Results are then reported back to the customer through DC Water's Customer Service Program.

DC Water Fountain and Sink Samples

At the request of DC Water's Union, DC Water's water quality staff collected lead samples from all locations that are used by employees for drinking purposes. Sample sites included fountains and sinks at all DC Water owned facilities.

Sampling procedures included flushing lines for several minutes, stagnating for at least 15 hours and collecting samples using 250 mL plastic bottles. All samples were analyzed by the Washington Aqueduct.

Customer Collected Profiles

DC Water operates a program when customers request a lead sampling kit without knowledge of their service line material. The profile kit comes with ten bottles and instructions on how to collect samples. Customers collect their own samples and contact DC Water to deliver the bottles to the Washington Aqueduct. Results are then reported back to the customer through DC Water's Customer Service Program.
